

A Vision for the Future
A Reality Today

Archiving the
FEATHER RIVER RAIL SOCIETY
Past, Present, Future

Issues:

Missing FRRS/WPRM documents

Missing FRRS/WPRM data

Need to have a paper trail for legal matters

Need to have documents for future officers and board members

Need to keep history of the FRRS

Issues:

Data and documents have been lost due to members moving on, moving out of the area, members not interested any longer and death of members.

This information has been lost forever.

There have been discussions about getting mass storage for electronic data for over 15 years, were just not paying attention.

The reality is that it was needed a long time ago, it is now taking place. The Historical/Archive Department in conjunction with the Signal Department has addressed these issues and has a new cloud based electronic storage system.

Improvements in the Historical/Archive Department has allowed the creation of not only a working computer with access to the internet, but has allowed access to a new cloud based storage system.

Nextcloud

An internet based cloud storage system that will allow records of the FRRS/WPRM to be stored and accessed so that all the data is in one place.

The Nextcloud System is in place and being used today.

The first year's Objectives:

Collecting FRRS/WPRM documents

Saving all museum data

Storing in a safe place

Internal input and storage by members that hold FRRS data

Backups are in multiple locations to keep data safe.
Can use search engine to find data quickly.
Can be copied to portable hard drives to be stored at museum (if needed).

What does all this costs:

\$ 0.00

This service is being provided free of charge.
There are multiple administrators to manage the system.

Possible integrated into all our other WEB based systems.
